

“Inspection service Oil & Gas Industry”

Company Profile

CM INSPECTION SWISS SAGL is a serious and reliable partner, able to guarantee high standards in quality and safety for Clients' projects, thanks to a strong collaborating attitude and its highly customizable service.

Our clients work on large projects with extended supply chain(s), and our team is able to reach Client's requirements through our working process, while always keeping an eye on the level of our service, which will be delivered with our high-quality standards.

CM INSPECTION SWISS SAGL offers many different services for many different needs, such as Inspecting and Expediting selected Vendors, as well as direct inspections on site and offers qualified personnel

Mission

- Fully understand what are Client's needs and priorities
- Offer a service that meets Client's requirements after understanding them
- Guarantee the right recognition of assignments
- Proactive attitude with Problem-Solving mindset

Vision

- Create a fully customized service, based on Client's needs
- Guide Client towards the transition to new technologies and ideas, as the world itself is evolving and changing, to keep up with most recent trends

Management Effort

CM's owners promote a commitment towards constant innovation and refining of its management, thanks to planning and constant activities monitoring each time a quality check of our system occurs.

In particular:

- Creating services that answer Client requests and current regulations, also providing value with attention on quality. To achieve this, the management offers all required resources in terms of budget, manpower and equipment;
- Engagement and awareness of every interested stakeholder so that above mentioned principles will be known and shared, being also aware of the importance of their role inside the Organization;
- Being able to provide business continuity and optimal usage of available resources, while minimizing risks.
- Start an active risk management by the usage retests happening on a regular basis, in order to guarantee that policies and procedures that support system management are being often reviewed, making sure they are up to date and that they fit the contest, laws and all regulations they are inserted in, including contractual obligations.

Objectives

In order to help our clients to reach and go beyond their objectives, quality in CM INSPECTION SWISS SAGL will be focused on these points:

- Guarantee Client's full satisfaction and satisfy their requirements, together with all involved parts through respecting existing deals between every participant and define channels for an open and transparent communication
- Utilize and improve our quality management system, in compliance with UNI EN ISO 9001 standards so that it can provide support to Company operations, as well as create a solid starting point for future management and development objectives.
- Analyze and understand market movements from a technologic point of view, also seeing chances to develop new services,
- Commit to a continuous improvement and evolution process in regards to the quality management system, planning, verifying and taking action to every possibility that shows the potential to prevent events that could compromise Company information systems, its know-how and of course, its clients.
